## PROFESSIONAL SUMMARY

DevOps Engineer with 2.9+ years of experience designing scalable, secure, and highly available AWS infrastructure for cloud and on-premise workloads. Skilled in system design fundamentals, Infrastructure as Code (Terraform), CI/CD automation, Docker, observability, Linux administration, and cost-aware cloud operations. Proven track record reducing deployment time by ~30%, improving release reliability, and supporting production application environments end to end.

## EDUCATION

**Master of Technology – Computer Networks Engineering** Oct 2020 – Mar 2023

SJB Institute of Technology Bangalore, India **CGPA: 8.5 / 10**

## WORK EXPERIENCE

**DevOps Engineer** Sep 2023 – Present

Nogrunt Collaborations Pvt Ltd Bangalore, India

*A QA automation company helping teams accelerate test creation, maintenance, and analysis — enabling up to 15× faster testing on cloud and on-premise.*

- Owned and managed scalable AWS infrastructure using **EC2, S3, IAM, ALB, VPC, security groups, and DNS**, applying high-availability patterns for production application workloads.
- Reduced deployment time by **~30%** by automating CI/CD pipelines with GitHub Actions, AWS Amplify, and Terraform-based infrastructure standardization.
- Engineered **Application Load Balancers** with target groups, listener rules, and health checks to improve traffic distribution, fault isolation, and application availability.
- Established **least-privilege IAM roles and policies** across environments, strengthening access control and security compliance for cloud resources.
- Configured **CloudWatch monitoring and alerts** across **application deployments** for application health, resource utilization, and proactive incident response.
- Managed **MySQL databases** across **3+ project environments** with scheduled backups, performance tuning, and cloud integration to reduce operational risk.
- Supported **3+ application deployments** across AWS and on-premise environments, covering Node.js workloads, database administration, monitoring, and access management.
- Applied **cost-aware infrastructure practices** by selecting fit-for-purpose AWS services, standardizing environments, and reducing manual operational overhead.
- Set up custom domains and **DNS** records across external providers, enabling secure and reliable application access.
- Led release coordination with **QA and development teams** to integrate deployment strategies into automated testing workflows, improving release stability and handoff efficiency.

## TECHNICAL SKILLS

**AWS:** EC2, S3, IAM, VPC, ALB, CloudWatch, Amplify, WorkSpaces

**CI/CD:** GitHub Actions

**Networking:** VPC, NAT, DNS, SSL/TLS

**Monitoring:** Prometheus, Grafana, CloudWatch

**Version Control:** Git, GitHub

**Scripting:** Python

**Databases:** MySQL

**Infrastructure as Code:** Terraform

**Containers:** Docker

**Operating Systems:** Linux (Ubuntu), Windows

## KEY PROJECTS

### Titan AWS EC2 · S3 · ALB · IAM · CloudWatch · MySQL

- Engineered and deployed a Node.js application on AWS using **EC2, S3, and an Application Load Balancer** to support scalable, fault-tolerant application hosting.
- Applied AWS security best practices with **IAM policies, security groups, and data encryption** to protect application and infrastructure access.
- Owned application-level **CloudWatch alerts** and standalone MySQL database operations to improve availability, observability, and incident response.

### Davinci Apache Tomcat · Prometheus · Grafana · MySQL

- Deployed and managed a Node.js application in an on-premises environment using **Apache Tomcat** for application hosting.
- Implemented monitoring and alerting with **Prometheus and Grafana** to track system performance, health, availability, and operational trends.
- Configured and administered the MySQL database using **MySQL Workbench** for maintenance, troubleshooting, and optimization.

### Dream Folks AWS WorkSpaces · Simple AD · VPC · NAT · MySQL

- Deployed a Node.js application on **AWS WorkSpaces** integrated with Simple AD through AWS Directory Service.
- Built and maintained a dedicated MySQL database environment for application data storage and administration.
- Designed a secure AWS network using **VPC, public/private subnets, and NAT instances**; administered WorkSpaces user access, provisioning, updates, and decommissioning.
- Applied lifecycle and access-management controls to improve endpoint governance, reduce unused resources, and support cost-aware operations.
