PROFESSIONAL SUMMARY

DevOps Engineer with **3+ years of experience** building and operating resilient, highly available, and scalable cloud-native infrastructure on AWS across cloud and on-premise environments. Hands-on with end-to-end integration of DevOps tools and processes, CI/CD pipeline automation, Infrastructure as Code (Terraform), containerization with Docker, monitoring and log analysis, IAM and cloud security, and Linux administration. Reduced deployment time by ~30% through pipeline automation and infrastructure standardization, and supported production application environments end to end. M.Tech in Computer Networks Engineering; Oracle Cloud Infrastructure Architect Associate certified.

TECHNICAL SKILLS

Cloud & Compute	AWS - EC2, S3, VPC, ALB, IAM, CloudWatch, Amplify, WorkSpaces, Directory Service; IaaS and PaaS services
CI/CD & IaC	GitHub Actions, AWS Amplify, automated build and deployment pipelines; Terraform (Infrastructure as Code); Docker (containerization)
Observability	Prometheus, Grafana, Amazon CloudWatch; log management and analysis, metrics, alerting
Networking & Security	VPC, public/private subnets, NAT, DNS, SSL/TLS, Application Load Balancing; least-privilege IAM roles and policies, security groups, data encryption, Simple AD
Databases	MySQL, PostgreSQL, MySQL Workbench; schema and user administration, backups, restores, performance tuning
Operating Systems	Linux - Red Hat Enterprise Linux (RHEL), Ubuntu; Windows Server
Languages & Tools	Python, Git, GitHub
Practices	High availability, cost-aware cloud operations, incident response, release coordination, operational documentation

WORK EXPERIENCE

DevOps Engineer

Sep 2023 - Present

Nogrunt Collaborations Pvt Ltd | Bangalore, India

A QA automation company helping teams accelerate test creation, maintenance, and analysis - enabling up to 15x faster testing on cloud and on-premise.

- Owned end-to-end AWS infrastructure using **EC2, S3, IAM, ALB, VPC, security groups, and DNS**, applying high-availability patterns for production application workloads.
- Reduced deployment time by **~30%** by automating CI/CD pipelines with **GitHub Actions**, AWS Amplify, and **Terraform**-based Infrastructure as Code standardization.
- Engineered **Application Load Balancers** with target groups, listener rules, and health checks to improve traffic distribution, fault isolation, and application availability.
- Established **least-privilege IAM roles and policies** across environments, strengthening identity and access management, access control, and security compliance for cloud resources.
- Configured **CloudWatch monitoring, logging, and alerts** across application deployments for application health, resource utilization, log analysis, and proactive incident response.
- Troubleshot real-time deployment and infrastructure issues in production, reducing time to resolution and improving release stability.
- Managed **MySQL databases** across **3+ project environments** with scheduled backups, performance tuning, and cloud integration to reduce operational risk.

- Supported **3+ application deployments** across AWS and on-premise environments, covering Node.js workloads, database administration, monitoring, and access management.
- Applied **cost-aware infrastructure practices** by selecting fit-for-purpose AWS services, standardizing environments, and reducing manual operational overhead.
- Set up custom domains and **DNS** records across external providers, enabling secure and reliable application access.
- Collaborated closely with **development, QA, and operations teams** to integrate deployment strategies into automated testing workflows, improving release stability and handoff efficiency.
- Produced and maintained operational and architectural documentation covering environments, deployment procedures, and runbooks.

KEY PROJECTS

Titan | AWS EC2, S3, ALB, IAM, CloudWatch, MySQL

- Engineered and deployed a Node.js application on AWS using **EC2, S3, and an Application Load Balancer** to support scalable, fault-tolerant application hosting.
- Applied AWS security best practices with **IAM policies, security groups, and data encryption** to protect application and infrastructure access.
- Owned application-level **CloudWatch alerts** and standalone MySQL database operations to improve availability, observability, and incident response.

Davinci | Docker, Prometheus, Grafana, MySQL

- Containerised the entire application stack with **Docker**, deploying a Node.js workload in an on-premises environment with standardised, repeatable builds across environments.
- Implemented monitoring and alerting with **Prometheus and Grafana** to track system performance, health, availability, and operational trends.
- Configured and administered the MySQL database using **MySQL Workbench** for maintenance, troubleshooting, and optimization.

Sharekhan | Red Hat Enterprise Linux, PostgreSQL, Node.js

- Provisioned, hardened, and maintained **Red Hat Enterprise Linux (RHEL)** servers hosting production application workloads, covering package management, patching, and service configuration.
- Deployed and operated a Node.js application on RHEL, managing **systemd services**, user and group permissions, and firewall rules for secure, reliable application access.
- Administered **PostgreSQL** databases across schema and user role management, access privileges, scheduled backups, restore verification, and query performance tuning.

EDUCATION

Master of Technology - Computer Networks Engineering Oct 2020 - Mar 2023

SJB Institute of Technology | Bangalore, India | **CGPA: 8.5 / 10**

CERTIFICATIONS

Oracle Cloud Infrastructure Architect Associate	Oracle | Oct 2025
Oracle Cloud Infrastructure Foundations Associate	Oracle | Oct 2025
Abstream Certified Professional on Enterprise Technology (ACPET)	Abstream | Sep 2019
